## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 55-79 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 55, for example, discloses a composition for synthesizing a nucleic acid molecule comprising compounds of formula I. Formula I is a molecule where a nitrogen atom is linked to 4 moieties R1, R2, R3, and A. It is described that R1-R3 can be =O. However a compound comprising a nitrogen linked to four =O is unlikely to be stable or to even exist because the maximum valence for a nitrogen atom is 4.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 55-62, 65-79 are rejected under 35 U.S.C. 102(b) as being anticipated by Chamberlin et al. (WO 95/20682).

Art Unit: 1656

Chamberlin et al. discloses the addition of osmolytes, to sequencing reactions and PCR as they are known to destabilize double-stranded DNA, thereby lowering the  $T_m$  of the DNA analyzed (see abstract and pages 8-12). Moreover, osmolytes are generally known to stabilize proteins and protect them from denaturation under stress conditions, such as heat.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jezia Riley whose telephone number is 703-305-6855. The examiner can normally be reached on 9:30AM - 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones can be reached on 703-308-1152.
